ABSTRACT

This document defines, describes usage of, and provides samples of student competency profiles being used in 17 vocational programs at Rutland Area Vocational-Technical Center in Rutland, Vermont. The profiles cover the following programs: auto body, auto mechanics, business/data processing, cabinetmaking, carpentry/masonry, culinary arts, distributive education, electrical/plumbing, electronics, graphic arts, health occupations, human services, machine trades, metal fabrication/welding, power and agricultural mechanics, secretarial, and timber harvest and forest production. The profile is presented as a multi-use tool for competency-based vocational education. Student evaluation, special needs, monitoring, teacher/student feedback, student employability, and program planning and accountability are areas to which the profile may contribute. A bibliography is included in this sample package. (Author/KC)

ABSTRACT

This document defines, describes usage, and provides samples of student competency profiles being utilized in seventeen vocational programs at Rutland Area Vocational-Technical Center in Rutland, Vermont. programs have the following titles: Auto Body, Auto Mechanics, Business/Data Processing, Cabinetmaking, Carpentry/Masonry, Culinary Arts, Distributive Education, Electrical/Plumbing, Electronics, Graphic Arts, Health Occupations, Human Services, Machine Trades, Metal Fabrication/ Welding, Power and Agricultural Mechanics, Secretarial, Timber Harvest and Forest Production. profile is presented as a multi-use tool for competency based vocational education. Student evaluation, special needs monitoring, teacher/student feedback, student employability, and program planning and accountability are areas the profile contributes to.

INTRODUCTION

The Rutland Area Vocational-Technical Center (RAVTC) in Rutland, Vermont began planning the development of Competency Based Vocational Education (CBVE) in 1982. The development process, over a period of eighteen months, was accomplished by the combined efforts of vocational instructors, administrators, and business and trades people from the Rutland community.

In the fall of 1984 there was a need to develop a student competency profile for use in the seventeen vocational programs. After reviewing several formats being used in other vocational programs around the country, one format was adopted and revised to meet the needs of Rutland's programs. Samples of the profiles now being used at Rutland can be seen in (section IV.) of this paper.

The competencies listed on the profiles reflect the skills actually being taught in the programs at the center. Criteria used in selecting the competencies include the following: resources and equipment available, instructors' background and abilities, and the needs of the surrounding community. The profile is presently in its second year of use at Rutland and has already received several minor changes. These changes have mostly concerned clarifying competency statements and adding/deleting competencies. More revisions will occur as an ongoing part of Rutland's CBVE implementation and will reflect any changes in program curriculums.

-2-

II. DEFINITION OF PROFILE

Student Competency Profile Chart - A Competency Based Vocational Education Instrument.

What is a Student Competency Profile Chart? It is a document that confirms a student's knowledge and performance for competencies in a vocational program as evaluated by the instructor. The conventional use of a profile as an evaluation tool presents it as an intrinsic part of CBVE. "Competency based education requires appropriate systems of evaluation and reporting of student achievement based upon what they know, rather than upon comparison with what other students know."1 The student competency profile being used at RAVTC is used as a check-off list indicating when a student completes specified competencies and reports the degree of proficiency the student has achieved. The profile takes on added dimension when favorable characteristics are present and properly applied. Additional uses will be discussed in (section III.) of this paper.

The format for the profiles being used at Rutland was taken from a profile which was developed by the U.S. Department of Labor and used for many years in Job Corps.² Revisions were made in the Evaluation Code Key and the method of sequencing competencies was changed to apply to Rutland's programs.

The Student Competency Profiles being used at RAVTC have some characteristics worthy of noting. One of these concerns the evaluation format. Consideration is given to performance and knowledge. The instructor evaluates a student's performance and/or knowledge using knowledge and performance tests which they are currently developing for each competency. The following is an example of the Evaluation code key being used at (RAVTC):

EVALUATION CODE KEY

Performance

- Can do all parts of the task needs job entry supervision.
- Can do most parts of the task -needs close supervision.
- 3. Can do simple parts of the task -needs extremely close supervision.
- DNP. Did not participate in this part of the program.

Knowledge

- 1. Can explain how and when a task must be done -can analyze facts and principles.
- Can name most steps in doing a task can explain simple facts and principles.
- 3. Can identify parts, tools and understands simple facts about the task.
- DNP. Did not participate in this part of the program.

Three other noteworthy characteristics can be seen in the Evaluation Code Key. Firstly, consideration is given to the student's supervision needs. All evaluations are based upon the assumption that training provided is aimed toward job entry skills. Therefore, the highest performance rating a student can attain, states that job entry supervision is needed. Secondly, as a student is rated higher on the knowledge scale, this indicates the student has attained more complex cognitive skills. Thirdly, some students, such as special needs students, might not be required to participate in certain parts of the programs. The instructor can indicate this by rating the student with DNP (Did not participate in this part of the program).

The first page of all the Student Competency Profiles contain sixteen competencies that are common to all the programs at RAVTC. The first competency pertains to safety. The second through sixth refer to attitude factors. The seventh through sixteenth consist of employability competencies that have been developed by the Vermont Department of Education for use in all vocational programs in the State. The seventeenth through the last competency apply to the specific programs. The competency statements are numbered and listed in an order to represent, as closely as possible, the sequence presented throughout the program duration.

Profile Usage

The value of the student competency profile can be attributed to its varied applications. It can be utilized for student evaluation, special needs monitoring, teacher/student feedback, student employability, and program planning and accountability.

As an evaluation tool, RAVTC uses it in conjunction with the traditional grading system. It is not perceived as an alternative to grading but as a supplement providing a clearer picture of a student's abilities and employability.

When a student enters a program, the instructor presents him/her with a copy of the profile. This allows the student a clear picture of the program expectations. Each student's profile is reviewed and updated by their instructor weekly or as the student completes new competencies. Three times per year, the updated profiles are delivered to the Rutland Center's administrative office for review and for recording in computer files. At the end of the school year a copy is placed in each student's permanent file located in the guidance department. When a student completes or leaves a program, a copy is available to them from the guidance department.

The following is a sample of guidelines provided for instructors for updating Student Competency Profiles:

GUIDELINES

- 1. Please enter a DATE in the appropriate boxes. eg. $\frac{\text{Mo./Yr.}}{3/86}$
- A student's profile should show a pattern of improvements in some competencies and a pattern of additional competencies being evaluated by the instructor as an ongoing routine.
- 3. Use your professional judgement in deciding to evaluate a student's <u>Performance And/Or Knowledge</u> of a particular competency.
- 4. Do not fill in $\underline{\text{DNP}}$ (Did not Participate) categories until the student's final evaluation in your program.
- 5. Review each Profile personally with each student INDIVIDUALLY. This should only take a few minutes weekly for each student, if done on a regular basis. Use instructional time to accomplish this.

The profile is being used at RAVTC by Special Needs

The profile is being used at RAVTC by Special Needs instructors for planning and monitoring. They have found it useful as a guide to assist in development of Individualized Vocational Plans (I.V.P.). They are able able to quickly identify objectives and monitor special needs students' progress. They have claimed that it saves time when writing reports and has improved communications with other vocational instructors at RAVTC.

The aspect of teacher/student feedback is important in vocational education. "Competency based education can better prepare students with on-going information regarding their personal progress." Consensus among Rutland's staff promotes the profile as providing uniform feedback for all students. Periodic reviews between instructors and individual students can more easily be accomplished using this document. The profile provides a clear list of student expectations and evaluation. Therefore, individual feedback can easily be provided and documented.

At the end of a student's training, which in most cases at RAVTC is two years, the student may obtain a copy of his/her profile to use as a supplement with a job application and resume'. Several business people in the community who have seen these profiles have given positive feedback concerning placement of students in their organizations. They have stated that the profile provides a clearer picture of employability and can save the employer time and money by quickly matching the new employee with appropriate duties.

The Student Competency Profile, being an accurate outline of the total program curriculum, becomes a useful planning guide. Teachers can refer to the competency list to help plan learning activities and help develop their lesson plans. An additional aspect of planning concerns program advisory committees. Each vocational program at RAVTC has an advisory committee that meets twice a year. The committees are made up of the vocational instructor, a vocational administrator, and several people from the community involved in fields related to the particular vocation. Their responsibility as a group is to recommend changes to meet the needs of the students and the community. The profile becomes a good reference for the committees to use when planning recommendations.

Lastly, and of considerable importance, the Student Competency Profile is an accountability tool. "Competency based education can provide better accountability to the general public for the educational program standards accepted by educational institutions." The student competency profile being used at RAVTC clearly states the vocational program expectations by listing the competency statements, and it clearly reports student achievement through the use of the evaluation format.
